ELEVENPATHS ANNOUNCES STRATEGIC SECURITY ALLIANCE WITH DEVO

- **The objective is to provide Telefónica Customers Advanced Cybersecurity Monitoring and Protection Services Through Devo Data Operations Platform.**

Madrid, June 14, 2018. - [ElevenPaths](#), the Telefónica Cybersecurity Unit, specialized in development of innovative security solutions, today announced a Strategic Alliance with [Devo](#), the Data Operations Company formerly known as Logtrust. The Devo Data Operations Platform will provide ElevenPaths with end-to-end security monitoring and data management services to rapidly detect and effectively track Cyber incidents, and reconstruct incident time-lines with all forensic evidence securely stored in a central location. In addition, ElevenPaths services such as [Clean Pipes](#) and Web Application Firewall (WAF) will feature embedded applications built on top of the Devo platform for developing customer portals with real-time enriched dashboards.

The partnership between ElevenPaths and Devo provides Telefónica customers with access to a suite of security services that will help them to comply with security and privacy regulations, including GDPR, and store customer data securely in Telefonica's data centers. Solutions include:

- **[Security Monitoring](#)** - a self-managed service that provides customers with a comprehensive view of the security status of their cloud, IT and security resources, and enables monitoring through customized alert generation.
- **[Data Management](#)** - a managed security service that enables Telefónica customers to collect, store, search and analyze in real-time any IT, security, network or application log data, regardless of its size or the retention period.

This partnership also enhances existing Telefónica security services, including WAF and Clean Pipes. Devo provides an extra visibility layer to the customer for these Telefónica security services, which control traffic, enable web filtering to limit exposure to malicious content and implement corporate internet usage policies, and protect against threats and unauthorized access. Customer portals for these services have been developed over the Devo platform, providing customers with real-time dashboards and reporting.

"Devo complements our existing security services, allowing us to provide Telefónica customers with real-time enriched customer portals to improve their overall security status," said **Pedro Pablo Pérez, Telefónica Global Security VP & ElevenPaths CEO**. "Providing security teams with real-time operational intelligence, significantly accelerates their security analysis and forensics to address today's rapidly expanding attack surface."

Devo solutions delivered through ElevenPaths enable Telefónica customers to manage and retain full visibility into every aspect of their security, helping them achieve their business security objectives, keep operational costs predictable, and enable IT teams to stay ahead of security issues.

"We are excited about the partnership with ElevenPaths and the advanced security capabilities we can offer together," said **Pedro Castillo, Founder and CTO at Devo**. "Combining Telefónica service offerings with the Devo Data Operations Platform provides customers with industry-leading security capabilities in an easy-to-use and easy-to-consume delivery model that scales to meet the growing performance and data demands of the world's largest enterprises to more effectively secure their businesses."

About ElevenPaths

At ElevenPaths, Telefónica Cyber Security Unit, we believe in the idea of challenging the current state of security, an attribute that must always be present in technology. We're always redefining the relationship between security and people, with the aim of creating innovative security products which can transform the concept of security, thus keeping us one step ahead of attackers, who are increasingly present in our digital life.
